Manual for Running code:

For Mongo DB,
A)Attach the ip config file in input as args[0]
B)port_number config file in input as args[1]
C)The third input as args[2] will be the number of operations you want to perform.
D)You need to attach the jar file of mongo which is in lib folder.

For Cassandra,
A)Attach the ip address in Cluster.
B)Install cassandra-manual module in python using pip install cassandra-driver.

For Redis,
A)Attach ip address in startup_nodes variable with port number.
B)Here you need to install redis module using 'pip install redis'.
C)Also install redis cluster with 'pip nstall redis-py-cluster'
